

- compressed air consumption on the inlet in BOSV, m <sup>3</sup> /min	– from 1,4 to 4,68;
- terminal overpressure, MPa, no more than	– 1,0;
- power, consumed with BOSV, kWt, no more than	– 0,4;
- supply voltage of the control circuits, V, direct current	– 75;
- total resistance of all the stages of BOSV, MPa, no more than	– 0,05;
- air consumption on adsorbent's regeneration in BOSV, by average working pressure, %, no more than	– 20;
- overall dimensions (L*B*H), mm	– 1065 * 550 *990;
- weight, kg, no more than	– 280.

Values of indexes of compressed air's quality correspond to demands of GOST 32202-2013 in the set point 2.
